Pac Tec, LLC In Line Machines

Pac Tec, LLC offers a complete range of in line style cup filling and sealing machines to meet almost every requirement. Machine sizes range from single lane to eight lanes with double index. Production rates of 20 to 25,000 per hour can be attained.

An Allen Bradley PLC with touch screen is offered to provide easy operation and reliability. All parameters are easily changed to provide the highest output of finished product. Servo controlled indexing allows for the fastest cycle times for any particular product.

Our wide range of filling stations will handle most products. Pac Tec servo controlled piston fillers provide excellent accuracy and maximum fill speeds. The sealing station is offered as either a roll stock film or pre-cut foil. Most style of over caps can be easily handled.

The stainless steel welded and polished base offer excellent rigidity and corrosion resistance. All components are designed for direct spray to facilitate wash down.

Pac Tec, LLC can provide a reliable and profitable solution for your packaging requirements. Please allow us the opportunity to quote on your next filling and sealing project.
